## TACTICAL SECURITY TRAINING

### What is AvciSystem?

AvciSystem is a synthesis of Avci Wing Tsun and Avci Escrima which has been developed for tactical use of security units based on more than two decades of experience in the field by the elite SWAT teams of Germany, both state and federal level.

### What is the difference between Avci Wing Tsun-Escrima and AvciSystem?

Avci Wing Tsun and Escrima are the two styles that are taught in WTEO (Avci Wing Tsun-Escrima Organization). AvciSystem is based on these two martial arts styles and specifically

developed for tactical use of security units (i.e. private security companies, public police, riot control police, prison guards, Customs Guards, Special Forces, military squads etc.).

While no civilian or ordinary security officer is in need of

learning how to take a criminal out of a car, this is very important for an organized crime police or a special force officer. AvciSystem techniques are adapted to tactical operational environment as a result of more than 20 years of practice with the elite police forces, and these techniques have been injected into tactical operational use.

For example, in a normal Avci WT school, a student doesn't learn how to transport a handcuffed person up and down stairs. But this is very important for a prison guard. Furthermore, an Avci WT student never learns how to secure a weapon, but this is essential for a police officer.

***Anybody can learn Avci Wing Tsun or Avci Escrima, but AvciSystem is taught only to the security units.***

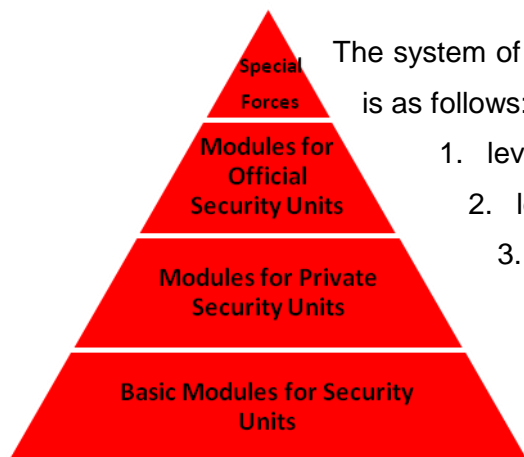

### **What does "AvciSystem Modular Training Pyramid" mean?**

Each security unit has different tactical needs. In AvciSystem, the needs of security units are studied systematically and different modules are developed according to the needs of different units.

The base of this "**AvciSystem Modular Training Pyramid**" is the basics for any security staff. From wider base towards the peak point, different modules have been placed and they are taught according to the needs of each security unit.

The base is common for any security unit. The modules for the private security units have been placed one level higher than the base. Over this level, the modules for the police/military officers have been placed. The peak is formed for the modules of Special Forces.

The system of the levels in "**AvciSystem Modular Training Pyramid**" is as follows:

1. level: basic modules for security units
2. level: modules for private security units.
3. level: modules for official security units (i.e. police, military, prison guards, customs guards, coast guards, etc.)
4. level: modules for Special Forces

**How many modules are there in each level of "AvciSystem Modular Training Pyramid"?**

The number of the modules, which are continuously developing, is different at each level of the Pyramid. For the time being, we prefer not to announce the modules publicly. For any information, please get into direct contact with Sifu Hasan AKIN, AvciSystem Tactical Security Training Coordinator.
